SKILLS

- Backend Development: Node.js, Express.js

- Basic knowledge of html, css, tailwind and react

- Databases: MySQL, MongoDB

- Version Control: Git, GitHub

- Other Tools: Docker, Postman

INTERESTS

- *Cricket*

- *Hiking and Trekking*

- *Music*

OBJECTIVE

To excel as a backend developer by designing secure, efficient, and scalable server-side applications. Skilled in Node.js, Express.js, and RESTful API development, with expertise in authentication mechanisms like JWT, database design and optimization (SQL & NoSQL), and containerization using Docker. Experienced in integrating third-party services, ensuring robust data security, and optimizing performance for high-traffic systems. Committed to delivering maintainable, high-quality code and collaborating with cross-functional teams to create innovative and reliable software solutions.

PROJECT

SecureFlow : A secure system enabling login, signup, and CRUD operations using JWT for authentication and data security.
